

PTG offers two options for Sodexo units looking to purchase digital signage to fit your location's needs.

Choose **Scala on PC** for the full signage experience to present your content in any fashion you choose – the sky is the limit using the PC option. This solution includes PTG's world-class customer service support and Scala's cloud-based content management system – upload, update, and schedule your content from any online computer in the world.

Sodexo units may also choose **SignApps Express**, a very lightweight program with limited support and no cloud-based options.

## SCALA ON PC

- Cloud-based solution – edit your signage from any computer in the world
- Edit your signage online – no uploading necessary aside from new photos or videos
- Upload photos, videos, HTML, data feeds and updatable Scala templates
- Use templates for easy edits and price changes
- Play video (multiple at once)
- Divide screen into zones
- Display a web page
- Transitions, shuffling content, tickers – all the bells and whistles to present your content in any fashion you choose
- First-class support – PTG can assist you by directly accessing your system over the web

## SIGNAPPS EXPRESS

- Not a cloud-based solution – requires physically plugging in USB drives to update content
- Can be set up on an LAN network by user choice – PTG cannot assist with network issues
- Edit menus in PowerPoint and import them into the program
- Use photos, videos, and PowerPoint presentations to present your menus
- Limited support – since PTG cannot directly access your system over the web, support is limited to telephone and email troubleshooting
- Free software – Most cost-effective option but fewest capabilities. Workarounds may be required for vertical screen setups.
